

UNIVERSITY OF MUMBAI

Bachelor of Engineering

Bachelor of Electronics Engineering
Second Year (Semester III and IV), Revised course
(Rev2012) From Academic Year 2013-14

(As per Credit Based Semester and Grading System with
effect from the academic year 2012–2013)

Preamble:

To meet the challenges of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty of Technology, University of Mumbai, in one of its meeting unanimously resolved that, each Board of Studies shall prepare some Program Educational Objectives (PEO's) and give freedom to affiliated Institutes to add few (PEO's) and course objectives and course outcomes to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. It was also resolved that, maximum senior faculty from colleges and experts from industry to be involved while revising the curriculum. I am happy to state that, each Board of studies has adhered to the resolutions passed by Faculty of Technology, and developed curriculum accordingly. In addition to outcome based education, semester based credit and grading system is also introduced to ensure quality of engineering education.

Semester based Credit and Grading System enables a much-required shift in focus from teacher centric to learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. University of Mumbai has taken a lead in implementing the system through its affiliated Institutes and Faculty of Technology has devised a transparent credit assignment policy and adopted ten points scale to grade learner's performance. Credit and grading based system was implemented for First Year of Engineering from the academic year 2012-2013. Subsequently this system will be carried forward for Second Year Engineering in the academic year 2013-2014, for Third Year and Final Year Engineering in the academic years 2014-2015 and 2015-2016 respectively.

Dr. S. K. Ukarande
Dean, Faculty of Technology,
Member - Management Council, Senate, Academic Council
University of Mumbai, Mumbai

Preamble:

The engineering education in India in general is expanding in manifolds. Now, the challenge is to ensure its quality to the stakeholders along with the expansion. To meet this challenge, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education and reflects the fact that in achieving recognition, the institution or program of study is committed and open to external review to meet certain minimum specified standards. The major emphasis of this accreditation process is to measure the outcomes of the program that is being accredited. Program outcomes are essentially a range of skills and knowledge that a student will have at the time of graduation from the program. An engineering program must ensure that its graduates understand the basic concepts of science and mathematics, have gone through one engineering field in dept of appreciate and use its methodologies of analyses and design, and have acquired skills for lifelong learning.

An engineering program must therefore have a mission statement which is in conformity with program objectives and program outcomes that are expected of the educational process. The outcomes of a program must be measureable and must be assessed regularly through proper feedback for improvement of the programme. There must be a quality assurance process in place within the Institute to make use of the feedback for improvement of the programme. The curriculum must be constantly refined and updated to ensure that the defined objectives and outcomes are achieved. Students must be encouraged to comment on the objectives and outcomes and the role played by the individual courses in achieving them. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

I, as Chairman, Board of Studies in Electronics Engineering University of Mumbai, is happy to state here that, Program Educational Objectives were finalized in a meeting where more than 20 members from different Institutes have attended, who were either Heads or their representatives of Electronics Engineering Department. The Program Educational Objectives finalized for undergraduate program in Electronics Engineering are listed below;

- To provide students with a strong foundation in the mathematical, scientific and engineering fundamentals necessary to formulate, solve and analyze engineering problems at hand and to prepare them for graduate studies.
- To prepare students to demonstrate an ability to identify, formulate and solve electronics engineering problems.
- To prepare students to demonstrate ability to design electrical and electronics systems and conduct experiments, analyze and interpret data.
- To prepare students to demonstrate for successful career in industry to meet needs of Indian and multi-national companies.
- To develop the ability among students to synthesize data and technical concepts from applications to product design.
- To provide opportunity to students to work as part of teams on multidisciplinary projects.
- To promote awareness among students for the life-long learning and to introduce them to professional ethics and codes of professional practice.

In addition to above more program educational objectives of their own may be added by affiliated Institutes and Heads of Departments.

In addition to Program Educational Objectives, for each course of undergraduate program, objectives and expected outcomes from learner's point of view are also included in the curriculum to support the philosophy of outcome based education. I believe strongly that small step taken in right direction will definitely help in providing quality education to the stake holders.

Dr. Dileep G. Borse
Chairman, Board of Studies in Electronics Engineering
University of Mumbai

Course Prerequisite: Applied Mathematics III

Course Objective:

This course will present the method of calculus of variations (CoV), basic concepts of vector spaces, matrix theory, concept of ROC and residue theory with applications.

Expected Outcome:

Students in this course will apply the method of CoV to specific systems, demonstrate ability to manipulate matrices and compute eigenvalues and eigenvectors, Identify and classify zeros, singular points, residues and their applications. After completion of this course students will be:

Module No.	Unit No.	Topics	Hrs.
1.0	1.0	Calculus of variation	10
	1.1	a. Euler's Langrange equation, solution of Euler's Langrange equation (only results for different cases for function) independent of a variable, independent of another variable, independent of differentiation of a variable and independent of both variables	
	1.2	b. Isoperimetric problems, several dependent variables	
	1.3	Functions involving higher order derivatives: Rayleigh-Ritz method	
2.0	2.0	Linear Algebra: Vector spaces	12
	2.1	Vectors in n-dimensional vector space: properties, dot product, norm and distance properties in n-dimensional vector space.	
	2.2	Metric spaces, vector spaces over real field, properties of vector spaces over real field, subspaces.	
	2.3	Norms and normed vector spaces	
	2.4	Inner products and inner product spaces	
	2.5	The Cauchy-Schwarz inequality, Orthogonal Subspaces, Gram-Schmidt process	
3.0	3.0	Linear Algebra: Matrix Theory	15
	3.1	Characteristic equation, Eigen values and Eigen vectors, properties of Eigen values and Eigen vectors	
	3.2	Cayley-Hamilton theorem, examples based on verification of Cayley-Hamilton theorem	
	3.3	Similarity of matrices, Diagonalisation of matrix	
	3.4	Functions of square matrix, derogatory and non-derogatory matrices	
	3.5	Quadratic forms over real field, reduction of Quadratic form to a diagonal canonical form, rank, index, signature of quadratic form, Sylvester's law of inertia, value-class of a quadratic form of definite, semi-definite and indefinite	
	3.6	Singular Value Decomposition	
4.0	4.0	Complex Variables: Integration	15
	4.1	Complex Integration: Line Integral, Cauchy's Integral theorem for simply connected regions, Cauchy's Integral formula	
	4.2	Taylor's and Laurent's series	
	4.3	Zeros, singularities, poles of f(z), residues, Cauchy's Residue theorem	
	4.4	Applications of Residue theorem to evaluate real Integrals of $\int_0^{2\pi} f(\sin\theta, \cos\theta)d\theta \quad \text{and} \quad \int_{-\infty}^{\infty} f(x)dx$	
		Total	52

Internal Assessment (IA):

Two tests must be conducted which should cover at least 80% of syllabus. The average marks of both the test will be considered as final IA marks

End Semester Examination:

1. Question paper will comprise of 6 questions, each carrying 20 marks.
2. The students need to solve total 4 questions.
- 3: Question No.1 will be compulsory and based on entire syllabus.
- 4: Remaining questions (Q.2 to Q.6) will be set on all the modules.
- 5: Weightage of marks will be as per Blueprint.

Term Work:

At least **08** assignments covering entire syllabus must be given during the **Class Wise Tutorial**. The assignments should be students' centric and an attempt should be made to make assignments more meaningful, interesting and innovative. Term work assessment must be based on the **overall performance** of the student with **every assignment graded from time to time**. The grades should be converted into marks as per the **Credit and Grading System** manual and should be **added and averaged**. The grading and term work assessment should be done based on this scheme.

		20	20	20		80	--	--	--	100

Prerequisite: FEC105 Basic Electrical & Electronics Engineering and EXC 302 Electronic Devices

Course Objectives:

1. To understand DC biasing needed for various applications.
2. To understand DC and AC models of semiconductor devices and usefulness of the devices for various applications like amplifiers, oscillators etc..
3. To apply concepts of DC and AC modeling of semiconductor devices for the design and analysis.
4. To understand theoretical concepts and verify through laboratory and simulation experiments.
5. To deliver the core concepts and reinforce the analytical skills learned in Electronic Devices
6. To motivate students to use MOS devices for designing and analyzing electronic circuits which will help them to understand the fundamentals required for further part of Engineering

Course Outcome:

1. Students will be able to understand and the usefulness of semiconductor devices in circuit making.
2. Students will be Able to perform dc and ac analysis of the basic electronic circuits useful to conclude an application based on these.
3. They will be able to analyze and design multistage electronic circuits.
4. Mainly understanding of discrete and integrated biasing will be understood and very useful for mixed mode designs..
5. They will understand the difference between small signal and large signal amplifiers.
6. They will be able to use these basic circuits to develop various useful applications.

Module No.	Topics	Hrs.
1.0	Bipolar device based circuit analysis	08
1.1	Review of Diode Based circuits: Analytical analysis of Single level clippers, Double level Clippers and clampers (both only explanation, no analytical analysis)	
1.2	DC Circuit Analysis of BJT: DC load line and region of Operation, Common Bipolar Transistor Configurations, Single base resistor biasing, voltage divider biasing and bias stability, Analysis and Design of biasing circuits	
1.3	AC Analysis of BJT Amplifiers: Bipolar Junction Transistor (BJT): Graphical Analysis and AC Equivalents Circuits, Small Signal hybrid-pi model (no other models), early effect, Common-Emitter Amplifiers, Common-Collector Amplifiers, Common-Base Amplifiers.	
2	Field Effect devices based circuit analysis	10
2.1	DC Circuit Analysis: Junction Field Effect Transistor (JFET): Self bias, Voltage divider bias, Design and Analysis of Biasing Circuits Metal-Oxide Field Effect Transistor (MOSFET): Common-Source circuits, DC load line and region of operation, Common-MOSFETs configurations, Analysis and Design of Biasing Circuits	
2.2	AC Analysis: JFET Amplifiers: Small-Signal Equivalent Circuit, Small-Signal Analysis MOSFET Amplifiers: Graphical Analysis, load line and Small-Signal parameters, AC Equivalent Circuit, Small-Signal Model. Common-Source, Source Follower, Common-Gate	
3.0	Multistage analysis and Frequency Analysis of Amplifiers	10
3.1	Multistage (CS-CS), (CS-CE) cascode (CS-CG) Amplifiers & Darlington pair.	
3.2	Effect of capacitors (coupling, bypass, load) on frequency response of JFET and MOSFET Amplifiers, High frequency hybrid-pi equivalent circuits of MOSFET, Miller Effect and Miller capacitance, unity gain bandwidth, Low and high frequency response of single stage (CS,CG, CD) and multistage (CS-CS).	
4.0	Feedback Amplifiers and Oscillators	08
4.1	Types of Negative Feedback, block diagram representation, Effect of negative feedback on Input impedance, Output impedance, Gain and Bandwidth with derivation, feedback topologies (analysis of different feedback circuits is not expected).	
4.2	Positive feedback and principle of oscillations, RC oscillators: Phase shift (no derivations), Wien bridge, LC Oscillators: Hartley, Colpitts and clapp, Tuned Oscillator (no derivations), Twin T Oscillator (no derivations), Crystal Oscillator (BJT circuits analysis).	
5.0	Differential Amplifiers	10
5.1	BJT Differential Amplifier: Terminology and qualitative description, DC transfer characteristics, Small signal Analysis, differential and common mode gain, CMRR,	

	differential and common mode input impedance.	
5.2	MOSFET Differential Amplifiers: DC Transfer characteristics, Small signal Analysis, differential and common mode gain, CMRR, differential and common mode input impedance.	
5.3	Constant Current Sources: Two transistor (BJT, MOSFET) current source, current relationship, output resistance. Improved three transistor (BJT, MOSFET) current source, Cascode (BJT, MOSFET) current source, Wilson and Widlar current source	
6.0	Power Amplifiers	06
6.1	Power BJTs, Power MOSFETs, Heat Sinks, Class A, Class B, Class C and Class AB operation, Power efficiency, Class AB output stage with diode biasing, VBE multiplier biasing, input buffer transistors, Darlington configuration.

Course Objective:

To create a strong foundation by studying the basics of Microprocessors and interfacing to various peripherals which will lead to a well designed Microprocessor based System. The course is a pre-requisite for all further courses in Microcontrollers and Embedded systems.

Course Outcome:

1. Students will be able to understand and design Microprocessor based systems.
2. Students will be able to understand assembly language programming
3. Students will be able to learn and understand concept of interfacing of peripheral devices and their applications

Module No.	Topics	Hrs.
1	Introduction to Intel 8085 Microprocessor: Basic functions of the microprocessor, System bus, Architecture, Pin Configuration and Programmer's model of Intel 8085 Microprocessor.	06
2	Intel 8086 Architecture: Major features of 8086 processor, 8086/88 CPU Architecture and the pipelined operation, Programmer's Model and Memory Segmentation	06
3	Instruction Set of 8086 and Programming: Instruction Set of 8086 microprocessor in details, Addressing modes of 8086/88, Programming the 8086 in assembly language, Mixed mode Programming with C-language and assembly language. Assembler Directives Procedures and Macros.	10
4	8086 Interrupts: Interrupt types in 8086, Dedicated interrupts, Software interrupts,	04
5	Designing the 8086 CPU module: 8086 pin description in details, Generating the 8086 System Clock and Reset Signals, 8086 Minimum and Maximum Mode CPU Modules, Memory interfacing with timing consideration, Minimum and Maximum Mode Timing Diagrams	10
6	Peripheral Controllers for 8086 family and System Design: Functional Block Diagram and description, Control Word Formats, Operating Modes and Applications of the Peripheral Controller namely 8255-PPI, , 8259- PIC and 8237-DMAC. Interfacing of the above Peripheral Controllers. Keyword and Display Interface using 8255.	08
7	Multiprocessor Systems: Study of Multiprocessor Configurations namely Closely Coupled System (CCS) and Loosely Coupled System (LCS), CCS with the case study of the Maths Coprocessor, Various System Bus Arbitration Schemes in LCS, and Role of the Bus Arbiter (Intel 8289) in the LCS.	08

EXC 404	Principles of Control Systems	20	20	20	80	--	-	--	100	

Prerequisite Topics:

Differential equations; Laplace transforms and Matrices.

Course Objectives:

Objectives of this course are:

1. To study the fundamental concepts of Control systems and mathematical modeling of the system.
2. To study the concept of time response and frequency response of the system.
3. To study the basics of stability analysis of the system and design of simple controllers

Course Outcome:

1. Students will be able to derive the mathematical model of different type of the systems.
2. Students will understand the basic concepts of control system.
3. Students will understand the analysis of systems in time and frequency domain.
4. Students will be able to apply the control theory to design the conventional PID controller widely used in the industries.

Module No.	Topics	Hrs.
1.	Introduction to control system analysis	06
	1.1 Introduction: Open loop and closed loop systems; feedback and feedforward control structure; examples of control systems.	
	1.2 Modeling: Types of models; Impulse response model; State variable model; Transfer function model.	
	1.3 Dynamic Response: Standard test signals; Transient and steady state behavior of first and second order systems; Steady state errors in feedback control systems and their types.	
2	Mathematical modeling of systems	08
	2.1 Transfer function models of various systems: Models of mechanical systems; Models of electrical systems; Models of thermal systems.	
	2.2 Manipulations: Block diagram reduction; Signal flow graph and the Mason's gain rule.	
3	State Variable Models	12
	3.1 State variable models of various systems: State variable models of mechanical systems; State variable models of electrical systems; State variable models of thermal systems.	
	3.2 State transition equation: Concept of state transition matrix; Properties of state transition matrix; Solution of homogeneous systems; solution of non-homogeneous systems.	
	3.3 Controllability and observability: Concept of controllability; Controllability analysis of LTI systems; Concept of observability; Observability analysis of LTI systems using Kalman approach.	
4	Stability analysis in time domain	06
	4.1 Concepts of Stability: Concept of absolute, relative and robust stability; Routh stability criterion.	
	4.2 Root locus analysis: Root-locus concepts; General rules for constructing root-locus; Root-locus analysis of control systems.	
5	Stability analysis in frequency domain	10
	5.1 Introduction: Frequency domain specifications, Response peak and peak resonating frequency; Relationship between time and frequency domain specification of system; Stability margins.	
	5.2 Bode plot: Magnitude and phase plot; Method of plotting Bode plot; Stability margins on the Bode plots; Stability analysis using Bode plot.	
	5.3 Nyquist Criterion: Polar plots, Nyquist stability criterions; Nyquist plot; Gain and phase margins.	
6	Compensators and controllers	10
	6.1 Compensators: Types of compensation; Need of compensation; Lag compensator; Lead compensator.	
	6.2 Controllers: Concept of ON/OFF controllers; Concept of P, PI, PD and PID Controllers.	
	6.3 Advances in Control Systems: Introduction to Robust Control, Adaptive control and Model predictive control.

Prerequisite Topics: Basic Electronic Devices and Circuits and measurements

Course Objective:

1. To understand basics of wireless communication systems.
2. To understand modulation and demodulation techniques.
3. To understand working of transmitters and receivers
4. To understand the basic concept of Digital communication

Course Outcome:

1. Students will be able to understand the components of wireless communication systems
2. Students will be able to understand various modulation techniques and their applications
3. Students will be able to understand difference between analog and digital communication

Module No.	Unit No.	Topics	Hrs.
1.0		Elements of Communication System :	08
	1.1	Electromagnetic Waves Propagation: Maxwell's equations for static and time varying fields, wave equation for free space and dielectric mediums, propagation terms and definition, electromagnetic frequency spectrum,	
	1.2	Basic communication system: Block diagram representation	
	1.3	Concept of Modulation and Demodulation: Signal representation, noise in communication signals and channels, signal-to-noise ratio, noise factor and noise figure, equivalent noise temperature	
2.0		Amplitude Modulation	10
	2.1	Principles of DSB Full Carrier AM	
	2.2	Different types of AM : DSB-SC ,SSB-SC , VSB, ISB	
	2.3	Practical diode detector	
3.0		Angle modulation	10
	3.1	Principles of Frequency Modulation and Phase Modulation	
	3.2	FM Modulators: Narrow band FM and wide band FM, FM transmitter, noise triangle, Pre-emphasis and De-emphasis circuits	
	3.3	FM Detection: frequency discriminator and phase discriminator	
4.0		Radio Receivers	06
	4.1	Receiver Characteristics , TRF Receivers, and Super heterodyne, Receivers, Choice of IF, AGC, AFC in AM and FM receivers	
5.0		Analog Pulse Modulation	08
	5.1	Sampling: Theorem, aliasing error and sampling techniques	
	5.2	Demodulation and spectrum of PAM, PWM, PPM	
6.0		Digital Pulse Modulation(only concepts and no numerical problems)	10
	6.1	Comparison of digital signal transmission and analog signal transmission	
	6.2	Pulse- code modulation (PCM) : sampling ,quantizing ,encoding technique, PCM bandwidth	
	6.3	Concept of Delta modulation (DM) and Adaptive Delta Modulation(ADM)	
	6.4	Multiplexing: TDM, FDM- Principles & applications

Term Work:

At least 10 experiments based on the entire syllabus should be set to have well predefined inference and conclusion. The experiments should be students' centric and attempt should be made to make experiments more meaningful, interesting and innovative. Term work assessment must be based on the **overall performance** of the student with **every experiment graded from time to time**. The grades should be converted into marks as per the **Credit and Grading System** manual and should be **added and averaged**. The grading and term work assessment should be done based on this scheme.

Internal Assessment (IA):

Two tests must be conducted which should cover at least 80% of syllabus. The average marks of both the test will be considered as final IA marks

End Semester Examination:

1. Question paper will comprise of 6 questions, each carrying 20 marks.
2. The students need to solve total 4 questions.
- 3: Question No.1 will be compulsory and based on entire syllabus.
- 4: Remaining question (Q.2 to Q.6) will be selected from all the modules.
- 5: Weightage of marks will be as per Blueprint.

Subject Code	Subject Name	Teaching Scheme (Hrs)			Credits Assigned			
		Theory	Practical	Tutorial	Theory	Practical	Tutorial	Total
EXC 406	Electrical Machines	3	--	--	3	--	--	03

Subject Code	Subject Name	Examination Scheme								
		Theory Marks					Term Work	Practical	Oral	Total
		Internal assessment			End Sem. Exam					
		Test 1	Test 2	Ave. Of Test 1 and Test 2						
EXC 406	Electrical Machines	15	15	15	60	--	-	-	75	

Course Objective: To understand performance, working of Electrical Machines and their characteristics etc.

Expected Outcome:

- 5. Students will be able to understand electrical motors and their working principles**
- 6. Students will be able to understand brushless drives**
- 7. Students will be able to understand special types of motors such as stepper motor and applications**

Module No.	Unit No.	Contents	Hrs.
1.0		DC Machines	08
	1.1	Construction: principle of working, MMF and flux density waveforms, significance of commutator and brushes in DC machine,	
	1.2	EMF equation: and Torque equation, characteristics of DC Motors,	
	1.3	Starters for shunt and series motors	
	1.4	Speed Control (Armature voltage control and field control using block diagrams)	
2.0		Three phase Induction Motor	08
	2.1	Construction: Working principle of squirrel cage induction motor,	
	2.2	Equivalent circuit: Equivalent circuit development, torque speed characteristics, power stages, no load and blocked rotor test	
	2.3	Speed control: Classify different methods, stator voltage control using Triac, V/f control using converter inverter scheme (only block diagram)	
	2.4	Starting methods: Classification and working of different methods, high torque motors	
3.0		Single phase Induction Motor	04
	3.1	Working Principle: Double field revolving theory	
	3.2	Starting methods: Split phase, capacitor start, capacitor start and run, shaded pole,	
	3.3	Equivalent circuit: Determination of equivalent circuit parameters by no load and blocked rotor test.	
4.0		Permanent Magnet Synchronous Motors	04
	4.1	Working principle, EMF and torque equations	
5.0		Brushless DC Motors	04
	5.1	Unipolar brushless DC motor, Bipolar brushless DC motor, speed control, important features and applications	
6.0		Stepper Motors:	06
	6.1	Constructional features, working principle	
	6.2	Variable reluctance motor: Single and multi-stack configurations, characteristics, drive circuits	
7.0		Switched Reluctance Motors:	04
	7.1	Constructional features, working principle, operation and control requirements	
		Total	38

**SE Electronics Engineering
Semester IV
Syllabus of Laboratory**

Subject Code	Subject Name	Teaching Scheme			Credits Assigned			
		Theory	Practical	Tutorial	Theory	TW	Tutorial	Total
EXL 401	Discrete Electronics Laboratory	--	02	--	--	01	--	01

Subject Code	Subject Name	Examination Scheme								
		Theory Marks					Term Work	Practical and Oral	Oral	Total
		Internal assessment			End Sem. Exam					
		Test 1	Test 2	Ave. Of Test 1 and Test 2						
EXL 401	Discrete Electronics Laboratory	--	--	--	--	25	50	-	75	

Syllabus: Same as **EXC402 (Discrete Electronics)**

Term Work:

At least 10 experiments based on the entire syllabus of Subject **EXC402 (Discrete Electronics)** should be set to have well predefined inference and conclusion. Computation/simulation based experiments are encouraged. Therefore, minimum of 05 simulation experiments be carried out (out of total 10 Expts.) The experiments should be students' centric and attempt should be made to make experiments more meaningful, interesting and innovative. Term work assessment must be based on the **overall performance** of the student with **every experiment graded from time to time**. The grades should be converted into marks as per the **Credit and Grading System** manual and should be **added and averaged**. The grading and term work assessment should be done based on this scheme.

The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work. Practical and Oral exam will be based on the entire syllabus.

Suggested Experiments on Simulation:

1. One SPICE simulations and implementation for BJT and FET DC biasing (Design and Testing)
2. One SPICE simulation and implementation for an Amplifier Design and Testing with measurement of input and output impedance.
3. One SPICE simulation and implementation for Frequency response of cascaded and single stage amplifiers.
4. One SPICE simulation and implementation for Oscillators.
5. One SPICE simulation and implementation for Negative feedback amplifiers.
6. One SPICE simulation for Differential amplifier with active load.
7. One SPICE simulation for power amplifier.
8. One SPICE simulation for Darlington/cascode amplifier.

EXL 402	Microprocessor and Peripherals Laboratory	--	--	--	--	25	--	25	50	

Syllabus: Same as **EXC 403 (Microprocessor and Peripherals)**

Term Work:

At least 10 experiments based on the entire syllabus of **EXC 403 (Microprocessor and Peripherals)** should be set to have well predefined inference and conclusion. Computation/simulation based experiments are also encouraged. The experiments should be students' centric and attempt should be made to make experiments more meaningful, interesting and innovative. Term work assessment must be based on the **overall performance** of the student with **every experiment graded from time to time**. The grades should be converted into marks as per the **Credit and Grading System** manual and should be **added and averaged**. The grading and term work assessment should be done based on this scheme.

The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work. Practical and Oral exam will be based on the entire syllabus.

Suggested Experiments

1. Write a program to arrange block of data in i) Ascending and (ii) Descending order.
2. Write a program to find out any power of a number
3. Write a programmable delay
4. Write a program to find out largest number in an array.
5. Experiment on String instructions (e.g Reversing of string & palindrome)
6. Write a programme to multiply 32 bit numbers
7. Menu driven programming
8. Write a program for code conversion
9. Programming the 8255 to read or write to port (any one application)
10. Programming the 8259 to demonstrate rotating priority, Specific priority ,etc

Syllabus: EXC 404 (Principles of Control Systems) 07 Experiments and EXC 406 (Electrical Machines) 03 Experiments

Term Work:

At least **03 experiments on EXC 406 (Electrical Machines) and 07 experiments on EXC 404 (Principles of Control Systems)** based on the entire syllabus should be set to have well predefined inference and conclusion. Computation/simulation based experiments are also encouraged. The experiments should be students' centric and attempt should be made to make experiments more meaningful, interesting and innovative. Term work assessment must be based on the **overall performance** of the student with **every experiment graded from time to time**. The grades should be converted into marks as per the **Credit and Grading System** manual and should be **added and averaged**. The grading and term work assessment should be done based on this scheme.

The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work. Practical and Oral exam will be based on the entire syllabus.
