UNIVERSITY OF MUMBAI

Bachelor of Engineering

Information Technology (Third Year – Sem. V & VI)

Revised course

(REV- 2012) from Academic Year 2014 -15

Under

FACULTY OF TECHNOLOGY

(As per Semester Based Credit and Grading System)

Preamble

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty of Technology, University of Mumbai, in one of its meeting unanimously resolved that, each Board of Studies shall prepare some Program Educational Objectives (PEO's) and give freedom to affiliated Institutes to add few (PEO's) and course objectives and course outcomes to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. It was also resolved that, maximum senior faculty from colleges and experts from industry to be involved while revising the curriculum. I am happy to state that, each Board of studies has adhered to the resolutions passed by Faculty of Technology, and developed curriculum accordingly. In addition to outcome based education, semester based credit and grading system is also introduced to ensure quality of engineering education.

Semester based Credit and Grading system enables a much-required shift in focus from teacher-centric to learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. University of Mumbai has taken a lead in implementing the system through its affiliated Institutes and Faculty of Technology has devised a transparent credit assignment policy and adopted ten points scale to grade learner's performance. Credit and grading based system was implemented for First Year of Engineering from the academic year 2012-2013. Subsequently this system will be carried forward for Second Year Engineering in the academic year 2013-2014, for Third Year and Final Year Engineering in the academic years 2013-2016 respectively.

Dr. S. K. Ukarande Dean, Faculty of Technology, Member - Management Council, Senate, Academic Council University of Mumbai, Mumbai

Preamble:

The engineering education in India in general is expanding in manifolds. Now, the challenge is to ensure its quality to the stakeholders along with the expansion. To meet this challenge, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education and reflects the fact that in achieving recognition, the institution or program of study is committed and open to external review to meet certain minimum specified standards. The major emphasis of this accreditation process is to measure the outcomes of the program that is being accredited. Program outcomes are essentially a range of skills and knowledge that a student will have at the time of graduation from the program. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

I, as Chairman, Board of Studies in Information Technology of University of Mumbai, happy to state here that, Program Educational Objectives were finalized in a meeting where more than 30 members from different Institutes were attended, who were either Heads or their representatives of Information Technology Department. The Program Educational Objectives finalized for undergraduate program in Information Technology are listed below;

- 1. To prepare Learner's with a sound foundation in the basics of engineering fundamentals.
- 2. To prepare Learner's to use effectively modern programming tools to solve real life problems.
- 3. To prepare Learner's for successful career in Indian and Multinational Organisations and to excel in Postgraduate studies
- 4. To encourage and motivate Learner's for entrepreneurship.
- 5. To inculcate professional and ethical attitude, good leadership qualities and commitment to social responsibilities in Learners.
- 6. To encourage Learner to use best practices and implement technologies to enhance information security and enable compliance, ensuring confidentiality, information integrity, and availability.

In addition to Program Educational Objectives, for each course of undergraduate program, objectives and expected outcomes from learner's point of view are also included in the curriculum to support the philosophy of outcome based education. I believe strongly that small step taken in right direction will definitely help in providing quality education to the stake holders.

Dr. J. W. Bakal Chairman, Board of Studies in Information Technology University of Mumbai, Mumbai

Co	ourse Objectives
1	The objective of the course is to equip students with the fundamental knowledge and
	basic technical competence in the field of computer graphics.
2	Provide an understanding of how to scan convert the basic geometrical primitives, how to
	transform the shapes so as to fit them as per the picture definition.
3	Provide an understanding of mapping from a world coordinates to device coordinates,
	clipping, solid modeling, rendering, and projections.
4	To comprehend and analyze the fundamentals of animation, virtual reality, underlying
	technologies, principles, and applications.

Co	ourse Outcomes
1	Students shall have understood basic concepts of computer graphics.
2	Students shall have understood algorithms to scan convert the basic geometrical
	primitives, transformations, Area filling, clipping.
3	Students shall have understood the fundamentals of animation, Virtual reality, the related
	technologies, and shall be able to describe applications of Virtual Reality.

DETAILED SYLLABUS

Sr. No.	Module	Detailed Content	Hours
1.	Introduction to Computer graphics and Output primitives	Introduction, Display Devices, Bitmap and Vector based graphics, Overview of Coordinate system, Scan Conversion of:point, line using Digital differential analyzer& Bresenham's algorithm, circle using midpoint approach, Curve Generation : Bezier and B-Spline curves. Introduction to fractals: generation procedure, classification, dimension and Koch Curve.	10
2.	Area Filling and Two Dimensional Transformations	Area filling : Inside/Outside Test , Scan line Polygon Fill Algorithm , Boundary Fill and Flood Fill algorithm. Basic Geometrical 2D transformations : Translation, Rotation, Scaling, Reflection, Shear, their homogeneous Matrix representation and Composite transformation.	8
3.	Two Dimensional Viewing	Introduction ,Viewing Pipeline , View Coordinate reference frame ,Window to viewport transformation, Point clipping, Line clipping: Cohen Sutherland Algorithm, Liang Barsky algorithms, Polygon clipping: Sutherland Hodgeman polygon clipping and Weiler Atherton. Text Clipping.	6
4.	Three Dimensional Transformation,Viewi ng and Projection.	Three Dimensional transformations: Translation, Scaling, Rotations, Composite. Three Dimensional object representation: Polygon Surfaces, Tables, Meshes. Three Dimensional Viewing Pipeline, Viewing transformation, Projections : Parallel(Oblique and orthographic), Perspective (one Point)	6
5.	Introduction to Animation	Key Frame Animation, Animation Sequence, Motion Control Methods, Morphing, Warping(only Mesh Warping).	2
6.	Introduction to Virtual Reality	Virtual Reality : Basic Concepts , Classical Components of VR System , Types of VR Systems, Three Dimensional Position Trackers, Navigation and Manipulation Interfaces, Gesture	8

		Interfaces, Graphical Display, Sound displays, and Haptic Feedback . Input Devices ,Graphical Rendering Pipeline , Haptic Rendering Pipeline, Open GL rendering pipeline.Applications of Virtual Reality.	
7	Modeling	Geometric Modeling: Virtual Object Shape, Object Visual Appearance.Kinematics Modeling: Object Position, Transformation Invariants, Object Hierarchies, Physical Modeling: Collision Detection, Surface Deformation, Force Computation. Behavior Modeling.	4
8	Introduction to VR programming	Introduction, Programming through VRML : Defining and Using Nodes and Shapes, VRML Browsers, Java 3D :Visual Object Definition by Shape 3D instances, Defining personal visual object class, ColorCube Class, Geometric – Utility Classes, Geometry Classes, Attributes.	4

Text Books

- 1 Donald Hearn and M. Pauline Baker, "Computer Graphics", Pearson Education.
- 2 R. K Maurya, "Computer Graphics with Virtual Reality", Wiley India.

Reference Books

- 1 Grigore Burdea, Philippe Coiffet, "Virtual Reality Technology", Wiley.
- 2 Steven Harrington, "Computer Graphics", McGraw Hill.
- 3 Rogers, "Procedural Elements of Computer Graphics", Tata McGraw Hill.
- 4 Vince, "Virtual Reality Systems", Pearson Education.
- 5 F.S. Hill, Stephen M. Kelley, "Computer Graphics using Open GL" Prentice Hall

Term work: Term Work shall consist of programs based on the given list. Journal must include at least 2 assignments.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Suggested Practical List:

- 1. Implementation of Line Drawing algorithms : DDA , Bresenham and using them generating line with different styles like dotted , dashed , centered and thick line.
- 2. Implementation of Circle generation algorithm : Midpoint and using it generating concentric circles.
- 3. Implementation of Area Filling Algorithm : Boundary Fill , Flood Fill and Scan line Polygon Fill.
- 4. Curve Generation : Bezier for n control points , B Spline (Uniform)
- 5. Fractal Generation (Koch Curve)
- 6. Program for performing Two Dimensional Transformations : Translation , Scaling , Rotation , Reflection , Shear by using a homogeneous Matrix representation ,use of a function for matrix multiplication is desirable , so as to perform composite transformation.
- 7. Implementation of Line Clipping Algorithm : Cohen Sutherland , Liang Barsky.
- 8. Implementation of Polygon Clipping Algorithm : Sutherland Hodgman.
- 9. Program to represent a 3D object using polygon surfaces and then perform 3D transformation.
- 10. Program to perform projection of a 3D object on Projection Plane : Parallel and Perspective.
- 11. Program for Animation.

It is desirable to implement some of the experiments by using Open GL.

In addition at least 3 programs using VRML and JAVA 3D APIs.

It is recommended to encourage the student to form a group for a mini project (a simple graphical utility) and for them submitting a theoretical Q. / A. type assignments can be kept optional.

Theory Examination:

- Question paper will comprise of 6 questions, each carrying 20 marks.
- Total 4 questions need to be solved.
- Q.1 will be compulsory, based on entire syllabus.
- Remaining question will be randomly selected from all the modules.
- Weightage of marks should be proportional to number of hours assigned to each module.

University of Mumbai, Information Technology (semester V and VI) (Rev-2012)

Course Code	Course Name	Teaching Scheme			Credits Assigned				
		Theory	Practical	Tutorial	Theory	TW/ Practical	Tutorial	Total

Code		Inter	nal asses	sment	End Sem.	Term Work	Practical	Oral	Total	
		Test1	Test2	Avg. of 2 Tests		WOIK				
TEITC502	Operating Systems	20	20	20	80	25		25	150	

Pre-requisites: Data structures, Programming Language (C / JAVA), Computer Organization & Architecture.

Course Objectives:

- To understand the main components of an OS & their functions.
- To understand the working of an OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS.
- To understand the concepts and implementation of virtual memory.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC.
- To study different file systems of OS like Linux, Windows and overview of OS for mobile & hand held devices.

Course Outcomes:

- Student will learn important computer system resources and their management policies, algorithms used by operating systems.
- Student will understand what makes a computer system function and the primary PC components.
- Student will understand the working of an OS as a manager of various resources.
- Student will implement some of the functions of OS such as scheduling policies, page replacement algorithms, IPC.

Sr. No.	Module	Detailed Content	Hours
1	Overview of Operating System	Operating system objectives and functions, Evolution of OS, Characteristics of modern OS, Basic concepts: Processes, Files, System calls, Shell, Kernel architectures: Monolithic, Micro-kernel, Layered, Kernel mode of operations.	4
2	Process Management	Process description: Process, Process States, Process Control Block (PCB), Threads, Thread management. Process Scheduling: Types, Comparison of different scheduling policies.	10
3	Process Co-ordination	Principles of Concurrency, Race condition and critical section, Mutual Exclusion- Hardware and Software approaches, Semaphores, Monitors, Message Passing, Producer Consumer Problem.	10
		Deadlock: Principles of Deadlock, Deadlock Detection, Deadlock Avoidance, Deadlock Prevention.	
4	Memory Management	Memory Management Requirements, Memory Partitioning, Virtual memory: Paging; Segmentation; Page replacement policies, page faults.	6
5	Input Output Management	I/O Devices, Organization of the I/O Function, Operating System Design Issues, I/O Buffering, Disk Scheduling and disk scheduling algorithms, Disk cache.	6
6	File Management	Overview, File Organization, File Sharing; Record Blocking; Secondary Storage Management.	6
7	Case Studies	Producer Consumer Problem, Multithreading, RAID, File systems of Windows and Linux, Overview of Android OS.	6

DETAILED SYLLABUS:

Text Books:

- 1. Modern Operating Systems, Tanenbaum, IIIrd Edition, PHI
- 2. Operating System-Internal & Design Principles, VIth Edition, William Stallings, Pearson
- 3. Operating Systems Concepts, Silberschatz A., Galvin P., Gagne G, VIIIth Edition Wiley.
- 4. Principles of Operating Systems, Naresh Chauhan, First Edition, Oxford university press.

References:

- 1. Operating Systems in Depth, Thomas W. Doeppner, Wiley.
- 2. Operating System Programming and Operating Systems, D M Dhamdhere, IInd Revised Edition, Tata McGraw.
- 3. Operating Systems, Achyut S. Godbole, 2nd edition, Tata McGraw Hill.
- **4.** Application development using Android, Hello, Android, mobile development platform, Ed Burnette, 3rd Edition.
- 5. Linux Command Line & Shell Scripting, Richard Blum and Christine Bresnahan, 2nd edition, Wiley.

Term work: Term Work shall consist of programs based on the given list. Journal must include at least 2 assignments.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance) **Oral Examination will be based on the above syllabus**.

Suggested Practical List:

- 1. Implementation of System Calls (at least five).
- 2. Implementation of CPU Scheduling Policies (both pre-emptive and non pre-emptive).
- 3. Implementation of Page Replacement Algorithms.
- 4. Implementation of IPC (Producer Consumer problem).
- 5. Implementation of Multithreading.
- 6. Implementation of Deadlock Avoidance algorithm (Bankers algorithm).

Theory Examination:

- Question paper will comprise of 6 questions, each carrying 20 marks.
- Total 4 questions need to be solved.
- Q.1 will be compulsory, based on entire syllabus.
- Remaining question will be randomly selected from all the modules.
- Weightage of marks should be proportional to number of hours assigned to each module.

Pre-requisites: Fundamentals of Computer, Digital Logic Circuits, Computer Organization and Architecture

Course Objectives:

CEO 1	To conceptualize the basics of embedded systems						
CEO 2	To conceptualize the basics of organizational and architectural issues of a microcontroller.						
CEO 3	To learn programming techniques used in microcontroller.						
CEO 4	To understand basic concept of ARM processor						
CEO 5	To understand fundamentals of real time operating system						

Course Outcomes:

Α	Ability to understand basic structure embedded systems
B	Ability to understand basic structure microcontroller.
С	Ability to understand basic concepts used in embedded system.
D	Ability to program microcontroller.
Ε	Ability to design conceptual embedded system.

University of Mumbai, Information Technology (semester V and VI) (Rev-2012)

Detailed Syllabus:

Module	Detailed Contents	Hours
1	Introduction to Embedded Systems: Overview of Embedded System Architecture, Application areas, Categories of embedded systems, specialties of embedded systems. Recent trends in embedded systems. Brief introduction to embedded microcontroller cores CISC, RISC, ARM, DSP and SoC.	06
2	The Microcontroller Architecture:Introduction to 8051 Microcontroller, Architecture, Pinconfiguration, Memory organization, Input /Output Ports, Counterand Timers, Serial communication, Interrupts.	08
3	Assembly Language Programming of 8051: Instruction set, Addressing modes, Development tools, Assembler Directives, Programming based on Arithmetic & Logical operations, I/O parallel and serial ports, Timers & Counters, and ISR.	10
4	ARM 7 architecture:Architectural inheritance, Detailed study of Programmer's model,ARM Development tools, Instruction set: Data processing, Datatransfer, Control flow. Addressing modes. Writing simpleassembly language programs. Pipelining, Brief introduction toexceptions and interrupts handling.	10
5	Embedded / Real Time Operating System: Architecture of kernel, Task and Task scheduler, Interrupt service routines, Semaphores, Mutex, Mailboxes, Message queues, Event registers, Pipes, Signals, Timers, Memory management, Priority inversion problem. Off-the-Shelf Operating Systems, Embedded Operating Systems, Real Time Operating System (RTOS) and Handheld Operating Systems.	8
6	Embedded System - Design case studies: Digital clock, Battery operated smart card reader, Automated meter reading system, Digital camera.	06

Text Books:

- 1. The 8051 microcontroller & Embedded systems, M. A. Mazidi, J. G. Mazidi, R. D. McKinlay, Pearson
- 2. The 8051 microcontroller & Embedded systems, Kenneth J. Ayala, Dhananjay V. Gadre, Cengage Learning
- 3. Embedded / real time systems: concepts, design & programming, Black Book, Dr. K. V. K. K. Prasad, Dreamtech press, Reprint edition 2013
- 4. Introduction to embedded systems, Shibu K. V., McGraw Hill
- 5. ARM System on chip Architecture, Steve Furber, Pearson, edition second

Reference Books:

- 1. Embedded systems an integrated approach, Laya B. Das, Pearson, Third impression, 2013
- 2. ARM system developer's guide, Andrew N. Sloss, Dominic Symes, Chris Wright, Morgan Kaufmann Publishers
- 3. Embedded system design A Unified hardware/software Introduction, Frank Vahid, Tony Givargis, Wiely
- 4. ARM Technical Reference manual

Term Work: 25 Marks (Total marks) = 15 Marks (Experiment and Case Studies) + 5 Marks (Assignments) + 5 Marks (Attendance)

The faculty should conduct eight programming practicals/experiments based on the above syllabus and two case studies based on recent trends in embedded systems.

Oral examination will be based on the above syllabus.

Theory Examination:

- Question paper will comprise of 6 questions, each carrying 20 marks.
- Total 4 questions need to be solved.
- Q.1 will be compulsory, based on entire syllabus.
- Remaining question will be randomly selected from all the modules.
- Weightage of marks should be proportional to number of hours assigned to each module.

TEITC504	Advanced Database Management Systems	20	20	20	80	25		25	150				

Course Objectives:

- 1. To reinforce and strengthen the database concepts learned in the basic course in database technologies
- 2. To impart skills that can help design and implement advanced queries using Structured Query Language.
- 3. To equip students with knowledge to implement and integrate databases in actual applications.
- 4. To make students aware of how databases are actually stored and accessed.
- 5. To introduce advanced concepts of transaction management and recovery techniques.
- 6. To initiate awareness about the potential security threats that exist in database systems and how to tackle them

- 7. To introduce other database models like distributed and object based
- 8. To create awareness of how enterprise can organize and analyze large amounts of data by creating a Data Warehouse.

Course Outcomes: At the end of the course the student will be able to:

- 1. Construct complex queries using SQL to retrieve and manipulate information in a database.
- 2. Design and implement full-fledged real life applications integrated with database systems.
- 3. Clearly understand how databases are actually stored and accessed; How transaction ACID properties are maintained and how a database recovers from failures.
- 4. Apply security controls to avoid any type of security incidents on vital database systems.
- 5. Design advanced data systems using Object based systems or Distributing databases for better resource management.
- 6. Understand the importance of enterprise data and be able to organize data to perform analysis on the data and take strategic decisions.

- 4. Ralph Kimball, Margy Ross, "The Data Warehouse Toolkit: The Definitive Guide To Dimensional Modeling", 3rd Edition. Wiley India.

Oral Exam:

An oral exam will be held based on the above syllabus.

Term work:

Assign a case study for group of 2/3 students and each group to perform the following experiments on their case-study:

Suggested Practical List

- 1. Problem Definition and draw ER /EER diagram
- 2. Creation of the database: using constrains and triggers
- 3. Advanced SQL must cover Views, nested and recursive queries.
- 4. Implementing an application and integrating with the database using JDBC, Dynamic and embedded SQL
- 5. Any one Database Hashing technique
- 6. Implementing and index using B or B+ trees.
- Creating and querying an Object database. Use ODL and OQL (Paper Exercise-Assignment)

University of Mumbai, Information Technology (semester V and VI) (Rev-2012) Page 22

- 8. Implementing a Distributed Database.
- 9. Demonstration of database security techniques SQL injection, inference attacks etc.
- 10. Problem Definition for a Data Warehouse, Construction of Star Schema Model.
- Creation of a DW and running OLAP operations on them (Roll up, Drill down, Slice, Dice, pivot)

Tools used:

- 1. Any Database software like Oracle, DB2, SQL Server, MY SQL or any other open source tools.
- 2. Programming to be done in JAVA.

Theory Examination:

- 1. Question paper will comprise of 6 questions, each carrying 20 marks.
- 2. Total 4 questions need to be solved.
- 3. Q.1 will be compulsory, based on entire syllabus wherein sub questions of 2 to 3 marks will be asked.
- 4. Remaining question will be randomly selected from all the modules.
- 5. Weightage of marks should be proportional to number of hours assigned to each module.

Course Objectives:

- 1. To introduce the concept of open Source Software.
- 2. To enable students to learn Linux Environment.
- 3. To make students well versed with Android and Shell Programming

Course Outcomes: On successful completion of this course students should be able:

- 1. To develop android applications.
- 2. To install and work on Linux.
- 3. To perform Shell Programming.

DETAILED SYLLABUS

Sr. No.	Module	Detailed Content	Hours
1.	Over View of Open Source Software	Need of Open Sources –Advantages of Open sources – Applications- FOSS – FOSS usage –Free Software Movement – Comercial Aspect of Open Source Movement – Licensing – Certification – Open Source Software Development Model – comparision with close source / Proprietary software – Free Software – Open source vs source –available –Widely used open source software license :Apache License, BSD license, GNU General Public License, GNU Lesser General Public License, MIT License, Eclipse Public License and Mozilla Public License.	04
2.	Open Source Operating System	Installation of Linux (Redhat-CentOS): Theory about Multiboot Enviroment, Hardisk Partitioning, Swap space, LVM, and Bootloader Command Line: Basic File System Manamgnet Task, Working with files, Piping and Redirection, Working with VI editor, use of sed and understanding FHS of Linux	04
3.	Open Source Operating System: system Administrator task	Job management, Process Mangment, Mounting Devices and filesystem working with Linux, Backup, working with user, group and permission, Managing Software. Understanding Boot process and related files, Common kernel Manamgnet Task	04
4.	Open source Operating System: Network and Security Administration	 Basic networking commands, Configuration of Apache Web servers, DNS servers, DHCP servers, mail Servers, NFS, FTP servers. Securing servers with IPtables. Setting up cryptographic services, SSL, Managing Certificate with OpenSSL, working with the GNU Privacy guard. 	06

5.	Open Source Operating System: Shell Programming	Bash Shell Scripting, Executing Script, Working with Variables and Input, Using Control Strutures, Script control, handling with signals, Creating functions, working sed and gawk -Working with web using shell script: Downloading web page as formatted text file and parsing for data, working cURL etc.	08
6.	Open source Tools Only in LAB	Version Control using RCS and CVS (hands on RCS in single Machine) Content management : Understanding working of Drupal (Basic Drupal components) Security assessment : OpenVAS IDE :Working of Eclipse	
7.	Open Source Mobile Programming	Android programming: Setting up Android Enviroment (using Eclipse for android development), Activites and Intents, User Interface, Designing UI using views, Data Persistence, Conent Providers, messaging and networking, Location-based Services, Publishing Android Applications	10

Text Books:

- 1. Redhat Linux 6.0 Administration Wiley
- 2. Linux Shell scripting Cookbook: Sarath Lakshman PACKT
- 3. Linux Lab Open source Technology : Ambavade -Dreamtech
- 4. Beginning Adnorid Development Wrox Press

References:

1. Drupal guide to Planning and Building Web Site: Wrox Press

Term Work: 25 Marks (Total marks) = 15 Marks (Experiment and Case Studies) + 5 Marks (Assignments) + 5 Marks (Attendance)

Suggested Practical List :

- 1. Linux command line : File System, Process Managment User Administration
- 2. Setting Up Web server, DNS server, FTP Servers
- 3. Working with IPTABLES, OpenVAS
- 4. Version Control
- 5. Working with Drupal
- 6. Shell Script
- 7. Andorid Setup
- 8. Programning in Andorid
- 9. Programming in Android

Theory Examination:

- 1. Question paper will comprise of 6 questions, each carrying 20 marks.
- 2. Total 4 questions need to be solved.
- 3. Q.1 will be compulsory, based on entire syllabus wherein sub questions of 2 to 3 marks will be asked.
- 4. Remaining question will be randomly selected from all the modules.
- 5. Weightage of marks should be proportional to number of hours assigned to each module.

Course Code	Course/Subject Name	Credits
TEITC506	Business Communication & Ethics	2

Pre-requisite

• FEC206 Communication Skills
